

IN THE SPECIFICATION:

Page 4, amend the second full paragraph at lines 13-25 as follows:

*A1*  
--According to another aspect of the present invention, provided is a system for downloading portions of a remotely located network object. The system includes a server facility, a software delegate and a client. The server facility is configured to store and to serve the software delegate and a network object. The server facility is further configured to be accessed via an electronic data network, such as the Internet and WWW. The client is configured to access the server facility via the electronic data network and to download and execute the software delegate. The client is further configured to download portions of the network object in accordance with the executed software delegate, until a completely downloaded copy of the network object is stored locally on the client.--
